

Stainless Steel Crown Order Form

Crowns are pre-trimmed for proper tooth coverage; anatomical gingival contour saves chair time when fitting crown.

Parallel crown walls saves chair time, minimizing the need for buccal, lingual, and mesial tooth reduction.

Consistent wall thickness helps prevent bite through and minimizes trial fitting distortion.

Shallow occlusal anatomy reduces rocking during mastication, with minimal occlusal interference.

DENOVO Stainless Steel Molar Crowns allow you to save healthy tooth structure, and eliminate time-consuming and unnecessary over-reduction of tooth surface. Shallow occlusal surface provides confidence of achieving optimum functional occlusion.

Stainless Steel Crown Kits

Primary kits contain 56 crowns.

The 1st Permanent kit contains 64 crowns.

Crown Kit	Part #
1st Primary Kit	902-100
2nd Primary Kit	902-200
